TS-0323 Multi-function extension box for full digital conference system
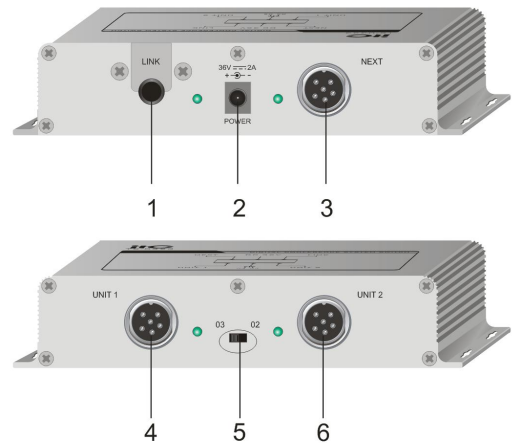

Feature

1.Unique appearance design.

2.With the function of extending the network.

3.With power supply function.

4.One-in-three-out connection unit supports network functions and has communication instructions.

5.Connect the controller and the unit to realize the interface extension function.

6.100M network transmission, hand in hand cascade.

7.Three switch controller ports, SSRAM, 10/100M Ethernet ports, each interface supports IEEE802.3, IEEE802.3u,IEEE802.3x standard. With strong anti-interference ability.

Product function introduction

1.LINK——Connect to the third-generation conference controller or the NEXT port of an extension box.

2.Power input interface, DC 36V input.

3.NEXT——used to connect to the next multi-function extension box.

4.6.——Connect the speech unit of TS-03 series.

5.——Set the unit switch that is connected to 02 or 03, and connect 02 to the speech unit of TS-02 series; connect 03 to the speech unit of TS-03 series.

Note:

Port LINK is to connect the third generation conference controller DELEGATES port or anotherTS-0323Port. Port NEXT/UNIT1/UNIT2 can be used for external TS-03Series unit or anotherTS-0323equipment. Please refer to the system connection diagram and apply the TS-0323 port LINK to the Delegates interface of the third-generation conference controller. The LINK status indicator will always flash green after the network connection is normal. The same applies to the status indicator of the port NEXT/UNIT1/UNIT2.

Technical Specification

Model	TS-0323
Power consumption	2.5W
Supply voltage/current	36V/2A
Connection method	Dedicated cable (6-PIN aviation wire)
Colour	Silver
Operating temperature	0℃～60℃
Environmental temperature	20%～80% relative humidity, no condensation
Weight	610g
Dimension (LxWxH)	180×111×40mm
